What will you do to stay safe?

Directions:

Design an Emergency Action Plan for your home. As medical professionals we need to be prepared for emergencies they may come up. Draw a sketch your home and describe what you would do for the following emergencies:

Fire

Tornado

Earthquake

Also, what safety concerns do you have at your home? Example (no fire extinguisher, dead batteries in smoke detectors, window that don’t open, etc)

What limitations would your home present if you were wheelchair bound? How would you fix the problems?
